

Simplify the following

$$x^4 \bullet x^3 = \text{XXXX XXXX}$$

x^7

$$\left(\frac{y}{3}\right)^2 = \frac{y}{3} \frac{y}{3} = \frac{y^2}{3^2} = \frac{y^2}{9}$$

$$(ab)^4 = ab \ ab \ ab \ ab$$

$a^4 b^4$

$$\left(\frac{k^2}{k^5}\right) \frac{k}{k} \frac{k}{k} \frac{k}{k} \frac{k}{k} = k^3$$

$$(3b)^4 = 3b \ 3b \ 3b \ 3b$$

$81b^4$

$$(91)^0 = 1$$

Quiz Time!!

6-2 Linear vs. Exponential

Arithmetic Sequence:

Add or Subtract to get next
number

Geometric Sequence:

* or \div to get the next number

State whether the following tables are arithmetic or geometric and then graph them.

x	-2	-1	0	1
y	-6	-3	0	3

Arithmetic or geometric?

b/c rate
is the
same

x	0	1	2	3
y	2	8	32	128

Arithmetic or geometric?

Arithmetic/Linear Function

$$y = mx + b$$

$\frac{\Delta y}{\Delta x}$

Geometric/Exponential Function

$$y = a(r)^x$$

State whether the following tables of values are linear or exponential and then write an equation.

x	0	1	2	3
y	125	25	5	1

Equation:

$$y = 125\left(\frac{1}{5}\right)^x$$

$\frac{2}{\vee}$ $\frac{2}{\vee}$ $\frac{3}{\vee}$

x	0	2	4	6
y	-4	-2	0	2

$\frac{\wedge}{2}$ $\frac{\wedge}{2}$ $\frac{\wedge}{2}$

Equation: $y = mx + b$

$$y = \frac{2}{2}x + -4$$

Use a graphing calculator to sketch the following graphs and state the common ratio and initial value

$$y = 3(2)^x$$

$$y = 2(5)^x$$

$$y = 2\left(\frac{7}{2}\right)^x$$

Use a graphing calculator to sketch the following graphs

$$y = \underline{4} \left(\frac{1}{\underline{2}} \right)^x$$

$$y = \underline{2}(0.\underline{1})^x$$

$$y = \underline{3} \left(\frac{2}{\underline{3}} \right)^x$$

Exponential Growth vs Decay

Based on the last two slides, what is the relationship between the equations and the graphs? Draw an example of each.

Growth:

Decay:

State whether the following are examples of growth or decay and the y-intercept.

$$y = 5(3)^x \quad y = 3(1.8)^x \quad y = 7(0.99)^x$$

$$y = 2\left(\frac{8}{3}\right)^x \quad y = 0.8\left(\frac{3}{2}\right)^x \quad y = 9\left(\frac{1}{6}\right)^x$$
