1. A boy flying a kite lets out 300 feet of string which makes an angle of $38^{\circ}$ with the ground. Assuming that the string is straight, how high above the ground is the kite?
2. A ladder leaning against the wall makes an angle of $74^{\circ}$ with the ground. If the foot of the ladder is $\mathbf{6 . 5}$ feet from the wall, how high on the wall is the ladder?
3. A straight road to the top of a hill is 2500 feet long and makes an angle of $12^{\circ}$ with the horizontal. Find the height of the hill.
4. An airplane climbs at an angle of $11^{\circ}$ with the ground. Find the ground distance it has traveled when it has attained an altitude of 400 feet.
5. A wire attached to the top of a pole reaches a stake in the ground 20 feet from the foot of the pole and makes an angle of $58^{\circ}$ with the ground. Find the length of the wire.
6. Henry is flying a kite. The kite string makes an angle of $43^{\circ}$ with the ground. If Henry is standing 100 feet from a point on the ground directly below the kite, find the length of the kite string.
7. A $\mathbf{2 5}$ foot ladder leans against a building. The ladder's base is $\mathbf{1 3 . 5}$ feet from the building. Find the angle which the ladder makes with the ground.
8. In order to reach the top of a hill which is 250 feet high, one must travel 2000 feet straight up a road which leads to the top. Find the number of degrees contained in the angle which the road makes with the horizontal.
9. A ladder leans against a building. The top of the ladder reaches a point on the building which is 18 feet above the ground. The foot of the ladder is 7 feet from the building. Find the measure of the angle which the ladder makes with the level ground.
